

Protecting our Students from Harmful Content Online

Photo by [Kari Shea](#) on [Unsplash](#)

The Children's Internet Protection Act (CIPA), passed in 2000, is a federal law that requires schools and libraries receiving discounts for internet services to have internet safety policies and technology to block or filter harmful or obscene material on the internet on school computers.

By taking the time to learn about CIPA and the resources available, parents can help protect their children from harmful online content and ensure their safety while using the internet. This

can include setting up p f nd
Lulu

Northside ISD complies with CIPA requirements by implementing several resources and policies.

We have developed policies and procedures for both staff and students regarding the use of school devices and the Internet, which are referred to as Acceptable Use Policies.

We provide education to students at all grade levels about internet topics, such as:

- Appropriate Behavior Online
- Safety and Privacy
- Cyberbullying

We provide technology protection measures to prevent students from accessing or receiving harmful material and safeguard student privacy information.

While CIPA requires Northside to have resources in place to limit a student's online activity, these resources may not

be available
